Job Market Paper: No blood in my mobile: regulating foreign suppliers

Can developed countries ensure that goods consumed domestically do not contribute to human and environmental rights violations in developing countries where they are sourced? This paper studies how global trade reacts to new due diligence policies, which constraint firms in developed countries to prevent human right violation involvement of their foreign suppliers. I study US the Dodd-Frank Act Conflict Mineral Rule (2010) and its consequences on source countries trade integration. It targets specific *conflict minerals* extracted in D.R.C. and adjoining countries. Comparing targeted bilateral trade flows to non-targeted products exporters within the structural gravity framework, I find that this policy decreased D.R.C. and adjoining countries exports value of 3T products by 70%. However, this new type of extraterritorial law has unintended consequences: I estimate that 38% of exports are diverted to opaque countries, called legal havens, after the law is implemented. Turning to consequences on US firms, I show that sales are negatively affected, while production and administrative costs increase at the timing of the law.
